Kitchen Planning · How to Measure Your Space

A basic drawing of your space will help our team tremendously with the design process. A sample floor plan is shown to the right. Once you have the dimensions and a rough sketch of your space, copy the information to a grid. We've provided some helpful tips to get you started below.

Tips for Measuring Your Space

- Measure in inches only
- Use a pencil to ensure easy changes
- Note all fixtures and utilities with dimensions
- Note all electrical outlets/switches with dimensions
- Include location and size of windows and doors
- Note the size and location of existing appliances
- Indicate which way doors swing and into which room
- Note breaks in walls and obstructions
- Indicate any transitions, soffits, and/or vents
- Denote ceiling height

Measuring Windows and Doors

Measure each door and window, and record using the grids below. Measurements should be from the outside edges of the window/door, from trim to trim. Don't forget, all dimensions should be in inches.

	Measurement A	Measurement B
	Width of Door	Height of Door
Door 1		
Door 2		
Door 3		
Door 4		

	Measurement A	Measurement B	Measurement C	Measurement D	Measurement E
	Floor to underside of window sill	Underside of window sill to top of window molding	Top of window molding to ceiling	Floor to Ceiling	Window width from outside molding to molding
Window 1					
Window 2					
Window 3					
Window 4					

For your convenience we've included a printable grid sheet on the following page.
